

# REPRO-HANDBUCH PROCESS LENS MANUAL

## Apo-Ronar/Apo-Ronar CL/ Apo-Ronar CLM

Das Apo-Ronar CL wird überwiegend in Horizontal- und Auto-Vertikalkameras eingesetzt. Die eng abgestuften Brennweiten reichen von 150 bis 1800 mm. Mit Ausnahme der Brennweite 150 mm (dieser Typ trägt nicht die Zusatzbezeichnung CL und hat keine linearisierte Blende) werden alle Apo-Ronar CL mit linearisierter Blende hergestellt.

Bis einschließlich 480 mm Brennweite ist der Bildwinkel 48°, darüber werden zwischen 40 und 46° erreicht. Das optische System setzt sich überwiegend aus 4 Linsen zusammen. Für besonders schwierige Aufgaben, wie zum Beispiel Kartografie, hat Rodenstock sechslinsige Typen der Brennweiten 600, 800, 1000 und 1200 mm entwickelt.

Für die Herstellung von gedruckten Schaltungen bietet Rodenstock das Apo-Ronar CLM an. Hier kommt es auf möglichst geringe Verzeichnung an. Durch bewußt erzeugte Asymmetrie im optischen System wird für einen fixen Maßstab die Verzeichnung reduziert – bis auf einen minimalen Fehler, der kleiner als 0,1% ist und für das Ergebnis keine Rolle mehr spielt.

Zur Aufnahme von Filterhaltern hat der Fassungskörper einen Schlitz.

## Apo-Ronar/Apo-Ronar CL/ Apo-Ronar CLM

The Apo-Ronar CL is primarily used in horizontal and vertical cameras. The closely spaced focal lengths range from 150 to 1800 mm.

All Apo-Ronar-CL lenses have linear aperture scales – except for the 150 mm lens. (This does not carry the CL-suffix and has no linear aperture scale.)

The angle of field is 48° for lenses up to and including 480 mm, above that it is 40–46°. Most Apo-Ronar CL lenses are four-element systems. For specially demanding jobs, for instance map making, Rodenstock has also developed six-element versions of 600, 800, 1000 and 1200 mm.

The Apo-Ronar CLM is intended for the reproduction of printed circuits where distortion must be at a minimum. A deliberate degree of asymmetry reduces distortion at a fixed reproduction scale. There residual distortion is below 0.01% – which is negligible.

A slot in the lens mount takes filter holders.

*Apo-Ronar/Apo-Ronar CL/Apo-Ronar CLM*

# REPRO-HANDBUCH PROCESS LENS MANUAL

## Zusammenhänge zwischen Format, Maßstab und Brennweite

Die erforderliche Brennweite ist bei bekanntem Maßstab und verschiedenen Formaten bzw. Formatdiagonalen aus diesen Grafiken ablesbar.

(Bei Vergrößerungen: Vorlagenformat, bei Verkleinerungen: Bildformat)

**Apo-Ronar/Apo-Ronar CL/  
Apo-Ronar CLM, max. 1200 mm**

## Image format, scale and focal length relationships

These diagrams show the focal length required to reproduce different formats of format diagonals at a given scale of reproduction.

(Refers to copy format for magnifications, to image format for reductions)

**Apo-Ronar CL, min. 1000 mm**
